CENTER OF INTEREST

2018- Specialized Research Station in Marin Ecosystems

- Design, experimentation and research in seaweed farming
- Analysis and interpretation of the results obtained
- Writing and participating in the implementation of research projects
- Chemical characterization of seaweed metabolites

2017-2018: internship in National civil engineering Laboratory (LABOGENIE)

2015-2016: Mastery of techniques for separating bioactive substances from plants

2013-2014: Academic internship at the Cameroonian Refinery Company

2015-2016: Master in Natural Products Chemistry - University of Dschang

2014-2015: Licence in Organic Chimistry – University of Dschang

Chemical characterization of seaweed metabolites

Analytical chemistry: structural analysis of secondary metabolites – biological activities- chemical structure – biological relationships

Analytical methods: extraction and fractionation- concentration – chromatography- NMR- Mass spectroscopy- HPLC

Logiciel : MERESNOVA, CHEMDRAW
